

BullSequana SA11Ea

BullSequana Agility

The BullSequana Agility family features a versatile range of 1-and 2-socket BullSequana SA servers, manufactured in France and powered by the latest generations of AMD EPYC™ and Intel® Xeon® Scalable processors. The servers are ideally suited for virtualised workloads and all modern architecture patterns, such as private and hybrid clouds, containerised infrastructures, hyperconverged and scale-out solutions. Various GPU options enable acceleration of AI/ML, video processing and image rendering workloads. BullSequana SA servers are delivered as standalone units or fully integrated in racks, along with networking and storage components to drastically reduce time to value.

Powered by the highest performance 4th or 5th Gen AMD EPYC™ Series processors with full memory capacity and large drive form factors, BullSequana SA11Ea is the perfect cost-effective platform for bare metal or virtualised general-purpose workloads, large scale-out storage repositories and high storage capacity hyperconverged platforms. The rich PCI expansion capabilities enable the maximum external connectivity.
