Bull

OneBSM

### Server monitoring and management

OneBSM is the intuitive interface to centralise the monitoring and management of your Bull servers from your workstation through a single pane of glass.

Analyse server health and increase workload availability

- Quickly identify server health categorised by status through an interactive dashboard
- Root cause analysis by drilling down to find source of the issue
- Monitor power consumption and carbon emission
- Historical graphs to track power consumption and sensors values over time

Update servers and control their state remotely at all times independently from OS

- Perform Firmware updates centrally (BIOS/BMC)
- Perform remote management tasks centrally

Role-based access control ensures giving the right access type to the right user

- Customisable user roles
- Two-Factor Authentication for added security
- Secured and tested

Minimise downtime

Ensure operations continuity

Reduce costs

Maximise efficiency of IT operations

Compatible with:

- BullSequana EXR
- BullSequana S Agility series
- BullSequana SH series
